## Intelligent Weighing Technology, Inc.

Non-Computing Scale / XM Series

**Application:** General purpose weighing.

**Identification:** Required information is located on a tamper evident adhesive label on the right side of the scale and on the indicating face of the scale.

**Sealing:** The scale is sealed by threading a lead and wire seal through the hole in a post attached to the bottom of the housing and protruding through the top of the housing under the platter.

**Test Conditions:** The models XM-1500, XM-15 and XM-30 were submitted for this evaluation. The emphasis of the evaluation was on device design, performance, marking, and compliance with influence factor requirements. Several increasing/decreasing load and shift tests were conducted. The scales were tested for accuracy over a temperature range of -10 °C to 40 °C (14 °F to 104 °F). A load of approximately one-half capacity was applied to the device over 100 000 times. The device was tested periodically during this time. Additionally, the devices were tested over a voltage range of 100 VAC and 130 VAC and 5.7 to 9.9 VDC power supplies.

**Evaluated By:** K. Jones (CA)

**Type Evaluation Criteria Used:** NIST, Handbook 44: Specifications, Tolerances and Other Technical Requirements for Weighing and Measuring Devices, 2011. NCWM, Publication 14: Weighing Devices, 2011.

**Conclusion:** The results of the evaluation and information provided by the manufacturer indicate the device complies with applicable requirements.
